DATA SHEET

Commodity: Molecular sieve 13 X **Composition:** 1 Na₂O : 1 Al₂O₃ : 2.8 ± 0.2 SiO₂ : xH₂O

Description: The sodium form represents the basic structure of the type X family, with an effective pore opening in the 910½ range. Will not adsorb(C₄F₉)₃N, for example.

Applications:

Removal of CO₂ and moisture from air (air pre-purification) and other gases.

Separation of enriched oxygen from air

Removal of mercaptan and hydrogen sulphide from natural gas

Removal of mercaptan and hydrogen sulphide from hydrocarbon liquid streams (LPG, butane, propane etc.

Catalyst protection, removal of oxygenates from hydrocarbons (olefin streams).

Removal of n-chained compositions from aromatics

Production of bulk oxygen in PSA units

Production of medical oxygen in small scale oxygen concentrators

Regeneration:

1. Dehydration: At 200~350°C and in pressure of 0.3~0.5kg/cm³, let a dryer gas goes through the sieve bed for 3~4hours. As the temperature in outlet at 150~180°C, let the bed cool off.
2. Removal of organic components: Replace the organic components with steam, then dehydrate

Specification:
