## DATA SHEET

**Commodity:** Macroporous Strong-Base Type II Anion Exchange Resin **Type:** A201

For efficient demineralization including silica removal

**Applications:** A201 is a high capacity, shock resistant, macroporous, Type II, strongly basic anion exchange resin supplied in the chloride or hydroxide form as moist, tough, uniform, spherical beads. A201 has a high operating capacity, especially on high-FMA feedwaters, as well as a high reversible sorptive capacity for complex organic materials, such as the fulvic and humic acids which occur in many surface water supplies.
